Introduction

Point details is an necessary part of point accessibility. Every point has certain details associated with it, which are the point name, description, longitude, latitude, created date, last modified date, and point ID.

Accessibility

Point details is accessed directly by clicking a point on map view. After this action, the user is then directed to the point details page where they can view all of the points information. If the user would like to edit the point they can click the "edit point" button or they may delete a point using the "delete" point button. No details are changeable from this screen.

Functionality

All users are presented with the following operations
- Edit Point
- Delete Point
- Return to MapView

Point Details

Created At: **Wed Dec 31 1969 16:00:00 GMT-0800 (Pacific Standard Time)**

Point Description: **test**
Longitude: **-118.192**
Latitude: **33.799**
Last Modified At: **Wed Dec 31 1969 16:00:00 GMT-0800 (Pacific Standard Time)**
Point Id: **736fd45d-fcc8-4b99-9b1e-ce191e714695**

[EDIT POINT]   [DELETE POINT]

Edit Point:

Once this button is clicked, the user is redirected to the point editor page. This has a mapview as well where it will center you on the point you selected for details.

Delete Point:

When clicked, this will delete the selected point from mapview. Once completed, you will then be redirected back the mapview page.

Back to Mapview:

This functionality isn't as obvious as buttons. However, once the user has clicked anywhere outside of the point details box, they will be redirected to Mapview.
